

Reliable Products Trustworthy People

MS332 Motor Speed Controller

TACH PROG STOP

Motion Controller

Key Features

- · Compatible with all variable-speed drives
- · Master, Ratio-Follower, and Index-Follower modes
- · Keypad/display menus and features
- Diagnostics for easy troubleshooting.
- Switch-input & NPN functions
- Serial Modbus communications
- Multiple Set-points

Description

The Electro-Sensors Model MS322 is a powerful and versatile tool for building numerous closed-loop processes. Closed-loop control capabilities include speed and phase control, electronic line shaft/gearing, event synchronization, and bi-directional control. The MS332 accepts quadrature encoder signals and almost any type of index/event sensor signal. The controller also provides the encoder/sensor power, which makes the MS332 ideal for new or existing systems. The MS332 supplies an isolated 0±10 VDC speed reference signal to the drive, making it compatible with virtually any variable speed drive (AC, DC, or Servo).

Description

Index Follower

- The MS332 automatically phases the feedback and lead event pulses to precisely synchronize events.
- Encoders and Shaft Speed Sensors work together error free.
- Feedback, lead, and event-pulse signals input to the MS332.
- Event pulses are commonly generated by proximity and photoelectric sensors, although other sources may be used.
- The follower phase set-point may be entered or determined by advancing/decrementing the set-point on-the-fly.

Ratio Follower

- The MS332 achieves true electronic gearing by precisely setting the follower ratio to master speed, resulting in zero cumulative error.
- Encoders and Shaft Speed Sensors work together error free.
- Feedback and lead signals input to the MS332
- Master Speed Ratio may be entered and changed on-the-fly.

Master

- The MS332 maintains the desired set-point speed.
- Feedback signal inputs to the MS332
- The user may easily change the set point by entering the desired new value into the front panel keyboard.

Typical Applications

- Packaging Machinery
- Centercore and Surface Winders
- Winding Machinery
- Ovens and Fans
- Pumps
- Extruders
- Printing Presses
- Replacement for some MS196 Units

MS332 Specifications

Input Power		
Voltage	115 or 230 Vac, 50 - 60 Hz	
Fuse	115 Vac: 200 mA, 5x20mm, slo-blo 230 Vac: 100 mA, 5x20mm, slo-blo	
Sensor Inputs		
Sensor Supply	12 Vdc @ 300mA Max	
Sensor Input	Single-ended NPN, PNP, Line-Driver, TTL, CMOS	
Trigger Levels	2V (Logic Low), 3V (Logic High)	
Encoder Type	Quadrature Incremental	
Encoder Frequency	1 Hz - 70 kHz	
Analog Output		
Signal Range	-11.5 to +11.5 Vdc (max swing)	
Resolution	Signed 12 Bits (8192 steps)	
Calibration	Digital (No Pots)	
Transistor Outputs		
Quantity, Type	4, Open-Collector NPN	
Rating	0.625 W (max.), 300 V (max.)	
Switch Inputs		
Quantity, Type	8, Shorting (pull to ground C)	
Serial Communications		
Protocol	Modbus RTU	
Data Types	16/32-bit integer, 32-bit float	
Operational		
Accuracy	Zero Cumulative Error (Follower) 0.01% of Speed set-point (Master)	
Set-points	4 per operating mode	
Mechanical/Environment		
Operating Temperature	0° - 70° C (32° - 158° F)	
Panel Cutout Dimensions	2 6" W x 4 3" H
